Prerequisites

Basic understanding of programming.

Duration

1 day course.

Class times

30 November 2017, Thursday from 10:00-18:00

Price

Euro 700, incl. workshop material, excl. VAT, billing and payment before the course, accommodation and travelling not included.

Instruction Method

Instructor-led workshop including hands-on exercises.

Versions

Workshop material for TMS 5.1 will be used, a TMS 5.1 workshop database will be used. TMS is developed in an evolutionary way, thus all functionality of previous versions is included in TMS 5.1.

Description

The basic steps how to load dictionaries into and to update dictionaries in TMS will be taught. A general approach how to develop load and update scripts for any dictionary entity relationship model will be demonstrated - not just applying a load script from the Oracle Clinical User Group homepage, but, learning how to help yourself. This will be exercised with a small artificial adverse event dictionary with a primary link.

Audience

Technical and support professionals, coders.

Course Topics

- Dictionaries & Domains
- Definition of a Dictionary (WHO-DRG/WHO-ART style)
- Development of Load Scripts
- Loading & Activation
- Dictionary Maintenance
